

# Solar Sentry™ Operating Doctrine

## Autonomous Jobsite Defense — Professionally Managed

### What the Solar Sentry Is (and Is Not)

Solar Sentry™ is not a camera trailer. It is a professionally deployed, monitored, and maintained autonomous security asset designed to operate in remote, high-risk environments without power or internet.

Because of this, every Solar Sentry operates under a defined deployment doctrine to ensure reliability, legal defensibility, and warranty protection.

### Deployment & Commissioning Protocol

Every Solar Sentry deployment includes site assessment and placement optimization, mast extension and camera calibration, AI detection tuning, connectivity verification, and full system commissioning.

**Result:** The system is fully operational, evidence-ready, and actively monitored from day one.

### Authorized Movement & Relocation Policy

**Solar Sentry units may ONLY be relocated, repositioned, or re-commissioned by an Authorized Caprock Technician.**

Unauthorized movement immediately voids the 3-Year Commercial Warranty and suspends monitoring services until the system is re-certified.

### Monitoring & Service Plans

Plan	Monthly	Purpose
Pipeline	\$350/mo	Connectivity only. No warranty protection.
Sentry	\$550/mo	System health, uptime monitoring, required for warranty.
Detective	\$850/mo	Full monitoring plus evidence concierge & police handoff.

Every Solar Sentry operates under one of the following managed service plans:

### Evidence & Incident Handling (Detective Plan)

On the Detective Plan, Solar Sentry functions as an evidence-grade system, including incident review, timestamped video export, secure evidence packaging, and law-enforcement-ready delivery.

## Warranty Protection (3 Years)

The Solar Sentry includes a 3-Year Commercial Warranty provided that the unit remains on an active Sentry or Detective Plan, no unauthorized relocation occurs, and all service actions are performed by Caprock Technology Group.

## The Bottom Line

Solar Sentry™ is a managed defense asset. Caprock handles deployment, calibration, monitoring, movement, and warranty protection. You get theft deterrence, operational visibility, and evidence when it matters.
